REMOVAL & REVISION OF UNDERWATER STRUCTURES

Ports, piers, bridges, etc. structures that are partially underwater should be checked regularly, corrosion and durability tests should be carried out, and if necessary, they should be strengthened or reconstructed. In case of re-construction, old structures must be dismantled and removed from under water.

The path followed in these procedures:

- **Crushing concrete with demolition hammers**
- **Cutting equipment**
- **Complete removal or removal of parts**
